**PROTECTING
YOU AND YOUR CUSTOMERS**

ATM ANTI-SKIMMING SECURITY

D.I.S.C. or Deep Insert Skimming Countermeasure is designed to take up the extra space in the dip card reader to allow for only one item a customer card or a skimming device.

ECS 4-in-1 detects skimming attacks directly at the card reader. Once an attack is detected, a random jamming frequency is emitted, scrambling any ability to obtain card data. Easy to install, few false alarms, ATM is not shutdown.

When DISC is combined with ECS, it provides best-in-class protection for your ATM.

ACG security solutions protect customers from fraudulent transactions and stolen card data; limiting institutions down time and protecting financial institutions brands and reputation.
